

Phase 6: Project Testing

Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

Team ID	SWTID-2026-3502	Team Size	5
Team Leader	Harini R	Platform	ServiceNow Flow Designer
Team Members	Mohamedanass, Prawin kumar D, Devisri.G, R.depeka	Project Type	Process Automation (ITSM / Service Catalog)

1. Testing Objective

The objective is to confirm that the flow creates a correctly configured catalog task for the Hardware group whenever a standard laptop request is approved, and that the end-to-end ordering process works without manual task creation.

2. Test Scope and Environment

- **In scope:** flow activation, catalog item mapping, ordering, approval, catalog task creation and field values.
- **Out of scope:** physical laptop imaging and delivery.
- **Environment:** ServiceNow instance with Flow Designer and Service Catalog; tester with requester, approver and admin access.

3. Test Cases

ID	Test case	Steps	Expected result	Status
TC-01	Flow status	Open Flow Designer and view Standard laptop task	Status shows Active	Pass
TC-02	Flow properties	Open flow properties	Application Global, Run As System User	Pass
TC-03	Catalog mapping	Open Standard Laptop > Process Engine	Flow field shows Standard Laptop task	Pass
TC-04	Order item	Service Catalog > Hardware > Standard Laptop > Order Now	Order Status page with a Request number	Pass
TC-05	Approval	Open Approvers tab, right-click and Approve	Approval state changes to Approved	Pass
TC-06	Task creation	Open RITM > Catalog Tasks	One catalog task is listed	Pass
TC-07	Short description	Open the catalog task	Short description reads Laptop needs to Configured	Pass
TC-08	Assignment group	View task Assignment group	Group is Hardware	Pass
TC-09	Approval field	View task Approval field	Value is Approved	Pass

ID	Test case	Steps	Expected result	Status
TC-10	Record linkage	Compare REQ, RITM and SCTASK	Task Request item matches the RITM	Pass
TC-11	Flow execution log	Flow Designer > Executions	Execution is listed for the order	Pass

4. Negative and Edge Tests

ID	Scenario	Expected behaviour	Result
NT-01	Flow deactivated	No catalog task is created, so the flow must be activated before use	Verified; flow re-activated
NT-02	Flow not added to Process Engine	No task is created for the order	Verified; mapping corrected
NT-03	Request rejected by approver	Order should not proceed to fulfilment	Verified
NT-04	Quantity greater than 1	Tasks are generated for the requested item as configured	Verified

5. Sample Test Data

Record	Value
Request	REQ0010001
Requested Item	RITM0010001
Catalog Task	SCTASK0010001
Assignment group	Hardware
Short description	Laptop needs to be Configured

6. Test Summary

Total tests	Passed	Failed	Pass rate
15	15	0	100%

7. Defect Log

No open defects remain. The issues found during testing were configuration slips (flow not active, flow not attached to the item) and were fixed by following the development steps exactly.

8. Outcome of the Phase

All planned tests passed. The solution is ready for documentation and demonstration.
